NEXTEK - Overview

Nextek is an **IT infrastructure and Enterprise services provider**. Nextek helps enterprises develop secure, well-managed and dynamic IT infrastructure. It enables clients to reduce their overall IT Infrastructure costs, make better use of IT resources and make IT a strategic asset of the business.

NEXTEK is synonymous with ...

- ✓ Innovative ideas to solve IT needs of the business
- ✓ Emerging technologies and making them a reality
- ✓ Keeping you ahead...Always

Remote IT Infrastructure Management

Remote Infrastructure Management services consist of remote (outside the physical premises of a company's facilities) monitoring and management of IT infrastructure components followed by proactive steps and remedial actions across the IT landscape.

RIMS comprise of day to day management of IT infrastructure needs of an organization from a remote location (although some services combine remote with on-site). RIMS constitute management of networks, security, servers, storage devices, applications, desktops and a 24x7 help desk.

Why Remote IT Infrastructure Management?

IT infrastructure is a key component in the strategies of enterprises today. Enterprises such as yours are looking at Remote IT Infrastructure Management Services (RIMS) to provide a competitive advantage. A robust IT infrastructure enables efficient delivery of services and improves overall business performance.

IDC estimates that over 85% of infrastructure components can be managed from a remote location. You can save up to 40-60 percent on operations and management of IT infrastructure if you outsource.

See the developing picture: lowered device prices, higher technology quotient, wide usage of technology across industry, compliance requirements, growing shortage of qualified talent, increasing cost of IT infrastructure management, retention issues with IT talent...The answer? Offshore IT infrastructure management to markets where talent is easily available and where tools and processes have been developed to manage your infrastructure remotely.

Nextek's strong foothold in IT Infrastructure domain gives competitive edge over others to understand client requirements comprehensively and deliver the best value service at competitive rates. Nextek has capabilities in managing diverse technologies by creating training, to rapidly improve the skill sets of its employees, and is placing a growing emphasis on rigorous quality processes.

NEXTEK Mission

“To be the most preferred and globally renowned IT Solutions and Services provider by adhering constant innovation and value driven preeminent service standards, leading to the best interest of stakeholders.”

Remote Infrastructure Management Services

Nextek is a services company providing expertise in IT Infrastructure and Enterprise Services, very closely aligned with well known software and hardware solutions. Focus areas are planing, deploying, and maintaining companies' IT Infrastructure including Systems Administration, Network Administration, Technical support for Web-based business and services, Backup and Recovery, IT Security and Content Management solutions.

Nextek provides all qualified and expert professionals to their client projects, enabling them to utilize the expertise, make use of the time-zone difference, and save costs while maintaining their IT Infrastructure, which is becoming a critical area for most CTO's and CIO's today.

Nextek has already tied up with niche consulting and IT firms in abroad as their preferred offshore partner in Infrastructure Management. These companies see the value coming out of the partnership, which would help them grow in the global market further - improving their existing margins and providing seamless service and support to their end-clients.

We continuously scan client requirements and meet them by covering respective services in our portfolio. Customers' satisfaction and regular feedback keep us motivated to deliver our best value service. Nextek currently covers following services as part of its RIMS portfolio.

Remote System Management

- Server and Storage administration, maintenance and day-to-day monitoring
- Database Maintenance
- Automation and Tasks scheduling
- Support for Development team and other stakeholders of IT systems

Network Management

- Network administration, maintenance and day-to-day monitoring
- Network performance check and optimization
- Network security and bandwidth management
- Network fault management
